

FLINT Security Services

Securing the Digital Economy

Security Operations Centre

Enabling new customer revenue

Selling new security portfolio products seems simple enough. Right up to the point where your end user asks you to **manage and monitor** the service on their behalf.

Flint's experience enables vendors and service providers to secure these new revenue streams. They can rely on us to design and implement an **ITIL compliant Security Operations Centre (SOC)** on their behalf.

“Expertise and experience that enabled the fast-track launch of a new service.”

Who Will Staff It?

The skills required to run an SOC are very specific and specialised. Flint has staff deployed operating complex environments across Europe, the Middle East, Africa, Asia, North America, and Russia. These consultants work on behalf of the vendor or service provider, providing the end user with the confidence they are looking for.

Global Compliance

Security guidelines have been tightened greatly over recent times and the manner in which data is managed, virtually and geographically, is increasingly important. Flint has invested heavily in **regional legal entities to ensure local compliance and regulatory guidelines** are upheld, in UKI, Canada, Germany, Egypt, India, Italy, Kazakhstan, Poland, Russia, Saudi Arabia, Slovenia, South

Africa, parts of Sub Saharan Africa, Turkey, UAE, and USA. This supplements the existing team of over 1800 consultants in more than 40 countries across Europe, the Middle East, Africa, Asia, North America, and Russia.

Policy & Assessment

The level of M&A activity in the ICT market is at an all-time high. As companies come together, the need to roll out a single security policy across the single organisation becomes a high priority item on the critical path.

Flint provides both policy recommendations and expertise to roll out and implement a single policy across the new consolidate company environment.

Flint has technical teams providing both capability and capacity to help tier 1 operators onboard recent mobility acquisitions in both Europe and the Middle East.

Firewall Migration

As firewalls reach end of life, there is an increasing trend in changing and consolidating vendor selection at point of refresh. This presents a complex firewall migration requirement that must take place, in a mission critical environment with zero downtime or impact to the end customer's experience.

Flint's expertise in multivendor firewalls, delivers migrations on time, on budget and with the highest levels of customer satisfaction.
